

**INTEGRATED PEOPLE SUPPORT
MANAGEMENT SYSTEM**

P-783

PROJECT WORK DONE AT
DSM SOFT PVT LTD, CHENNAI

PROJECT REPORT

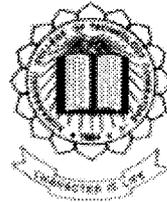

SUBMITTED IN PARTIAL FULFILLMENT OF THE REQUIREMENTS

FOR THE AWARD OF THE DEGREE OF

**MASTER OF COMPUTER APPLICATIONS
OF BHARATHIAR UNIVERSITY, COIMBATORE.**

SUBMITTED BY

T.SADASIVAM NAVEEN SENTHOORAN
Reg. No. **9938M0631**

GUIDED BY

INTERNAL GUIDE

Mrs.L.S.Jayashree, M.E,
Department of computer science,
Kumaraguru college of technology,
Coimbatore.

EXTERNAL GUIDE

Mrs.Geetha Ganesh,
Project leader,
DSM Soft Pvt Ltd,
Chennai.

Department of computer science and engineering
Kumaraguru College Of Technology
Coimbatore - 641 035
May-2002

Department of Computer Science and Engineering

Kumaraguru College Of Technology

(Affiliated to the Bharathiar University)

Coimbatore - 641 035

CERTIFICATE

This is to certify that the project entitled
“Integrated People Support Management System”

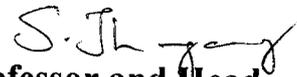

Done By

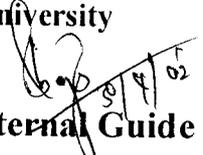

T.SADASIVAM NAVEEN SENTHOORAN

Reg. No. 9938M0631

Submitted in partial fulfillment of the requirements for the award of degree of

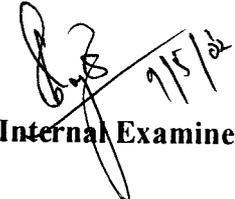

Master of Computer Applications of Bharathiar University

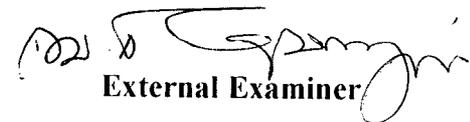

Professor and Head 30/4/02

Internal Guide

Submitted to University Examination held on

09-05-2002

Internal Examiner

5TH APRIL 2002

TO WHOMSOEVER IT MAY CONCERN

THIS IS TO CERTIFY THAT MR. T. SADASIVAM NAVEEN SENTHOORAN, REG.NO
9938M0631, DOING MASTERS IN COMPUTER APPLICATION IN KUMARAGURU
COLLEGE OF TECHNOLOGY, COIMBATORE, HAS SUCCESSFULLY COMPLETED
THE PROJECT WORK DURING THE PERIOD OF DECEMBER 2001 TO MARCH 2002.

**PROJECT TITLE : INTEGRATED PEOPLE SUPPORT MANAGEMENT
SYSTEM**

SOFTWARE USED : VISUAL BASIC 6.0, ORACLE 8i

DURING THE ABOVE PERIOD, HIS CONDUCT AND CHARACTER WAS
FOUND TO BE GOOD.

YOURS TRULY,
FOR DSM SOFT (P) LTD.,

ACKNOWLEDGEMENT

ACKNOWLEDGEMENT

An endeavor over a long period can be successful only with the advice and support of many well wishers. I take this opportunity to express my gratitude and appreciation to all of them.

I am bound to express my gratitude to **Dr. K.K. Padmanaban Ph.D**, *Principal, Kumaraguru College of Technology, Coimbatore*, for his constant encouragement throughout my course.

I record my sincere thanks to **Dr. S. Thangasamy Ph.D**, *Head of the Department, Computer Science and Engineering, Kumaraguru College of Technology*, for allowing me to take up the project at *DSM Soft Pvt Ltd., Chennai*.

I wish to thank **Mrs. Jayashree M.E**, *Dept of Computer Science and Engineering, Kumaraguru College of Technology*, for constantly encouraging me to pursue new goals and ideas.

I also owe my sincere thanks to **Mrs. Geetha Vellingiri**, *Course coordinator, Master of Computer Applications, Kumaraguru College Of Technology, Coimbatore* for her guidance and immense support throughout my project work.

I am deeply indebted to **Mr.Ramesh Anathkrishnan**, *Managing Director, DSM Soft Pvt Ltd, Chennai* for enabling us to do the project in their esteemed organization.

I express my heartfelt gratitude to **Mrs.Geetha Ganesh** , *DSM Soft Pvt Ltd, Chennai* , My project leader for her inspiring advice, immense help, whole hearted support and constant encouragement throughout the tenure of this project work.

I wish to thank all my friends and colleagues in *DSM Soft Pvt Ltd*, especially **Miss.Geetha Hariharan, Miss.Dhivya, Mr.Anand Kumar**, without whose whole-hearted support and encouragement this project wouldn't have been a successful.

Last but not the least I would like to thank my parents and my brothers and sisters for their support, encouragement and prayer which were instrumental in the successful completion of this project.

T.Naveen.

SYNOPSIS

Synopsis

This project work was undertaken at a fast expanding software firm *DSM SOFT PVT LTD, Chennai*. This “Integrated People Support Management System” is developed for their software company itself. A period of 15 days is spent for the study of the existing system and the new system overcoming the existing drawbacks was designed. It took four months time to complete the coding and implementation work. On the date of submission of this project work the new system “Integrated People Support Management System” is in use at *DSM SOFT PVT LTD, Chennai*.

This application is to reduce the time involved by the people in the people support department and the accounts department for employee recruitment , salary generation for entire company and for year ending settlements which involves lots of formula calculation. The are of automation is the recruitment process of the people support department and the salary and year end settlement generation process of the accounts departments.

This “Integrated People Support Management System” has various modules such as company details, category details, candidate details, offer and appointment letter generation, employee information ,variable earning maintenance, variable deductions maintenance, pay processing, pay slip printing, several reports and salary statements for the management. It also has a provision for backups.

The new “Integrated People Support Management System” was developed in a multi-user environment HP 18000 series 817 machine with windows NT as the operating system. The RDBMS was ORACLE 8i. The database connectivity used here is ADO provider without using any foreign tools. The report used here is the Crystal Report.

INTRODUCTION

Integrated People Support Management System.

1.Introduction:

The application is to reduce the time involved by the people in people support department and the accounts department of employee recruitment, salary generation for the entire company and for year ending settlements which involves lot of formula calculations. The area of automation is the recruiting process of the people support department and the salary and year end settlements generation process of the accounts department.

1.1 Project Overview:

The main objective of this software application is to reduce the time involved by the people in the People Support Department and the Accounts Department for Employee Recruitment, Salary Generation for the entire company and for Year Ending statements where various formulae can be used dynamically to affect salary calculations. The area of automation is the Recruiting process of the People Support Department, and the Salary and Year-End settlement generation process of the Accounts Department.

This software is intended to reduce the manual work done and also to reduce the amount spent during manual maintenance. The major aspect of this software development is its two-tire architectural design here COM (Component Object Model) – reusability of code, concepts are applied.

Integrated People Support Management System.

1.2 Organization Profile.

DSM Soft (P) Ltd., is the parent company of DSM Info systems (P) Ltd., Since its inception in 1991, it has been offering high quality, cost-effective solutions / services to a diverse world wide client base in the CAD industry and also in the software industry.

DSM is one of the leading CAD services organization, providing a wide range of solutions / training in the CAD industry. Since its birth in 1991, DSM has gained extensive and inevitable experience in executing domestic and overseas projects for companies in manufacturing, aerospace and allied industries. DSM has a strong experienced software team that takes care of both offshore projects and in-home projects. The increasing demand for the sophisticated products of higher quality, at a tremendously faster rate has made the world look for much more powerful development tools.

DSM is constantly striving for its betterment, speed and quality in our projects both domestic and overseas and have zeroed down on a product that has got immense capabilities in Parametric Solid Modeling Solutions, Mechanical / Industrial Design Solutions, Functional Simulation, Manufacturing Solutions, Data Management Solutions and Data Exchange Solutions.

Success requires introducing products faster than your competitors at a lower level cost and higher quality. At the same time during the development cycle you must evaluate and optimize manufacturing costs. To achieve these imperatives, your product development process must provide a strategic competitive advantage, and at DSM, you can be best assured that DSM takes care to follow the above strictly, to achieve your goals.

Integrated People Support Management System.

1.2.1 DSM Services

DSM Soft delivers a unique blend of service benefits with its high quality solutions to secure your IT strategy:

- On Plan Project Performance
- High quality of deliverables
- Complete harmonization with requirements
- Best practices

1.2.2 Software Development

DSM Soft believes in mature software development services that confirm to the highest industry standards. It has dedicated team of developers with good software infrastructure to handle offshore projects and in home projects.

DSM expertise on the following areas of the software projects:

- Project Management
- System Analysis
- Design
- Programming
- Testing
- Software Maintenance

DSM has dynamic, result oriented, highly qualified self-disciplined Software Professionals from reputed Universities.

**SYSTEM STUDY
AND ANALYSIS**

Integrated People Support Management System.

2. System Study and Analysis.

2.1 Existing System-Limitations.

The existing system of the “Integrated People Support Management System” is done manually by the company persons.

So in order to overcome the drawbacks like

1. Security
2. Time
3. Cost
4. Reliability

We move to computerized the process through the software development. So by computerized the system we can attain all the advantage like the security, reliability, save time and cost. So keeping this in mind they have decided to develop the software for their requirement .

The another aspect of the existing system is that if the entry is made in the book then it is a wrong one then it become a tedious job for them to rectify it. So they have to follow many rules to overcome it. So this lead to a complication process. And during the time of report generation the extra entry will lead to some complications.

The record keeping is also a difficult job for them to maintain it very safely for future reference. Since any loss of any records will lead to a huge loss to the company and it's a various tedious job for then to compensate their loss.

Some problems in this manual work is that every employee is given a unique id. So with this id the employee is referred in all the aspect of the company process activity. So this careless manual work will lead to a redundancy. Say for example, a employee should be allocated loan only after the previous loan is pay back.

Integrated People Support Management System.

2.2 Proposed System:

This application is to reduce the time involved by the people in the People Support Management system and the Accounts department for employee recruitment and salary generation for the entire company and for the year ending settlements which involve lots of formula calculation. The main idea behind automation is the recruiting process involved by the People Support Department, the salary generation and year end settlement generation process of the Accounts Department.

The process involved is as follows,

Automation of the People Support system covers the following functions,

- Master Details maintenance
- People Support Details maintenance
- Payroll processing
- Tax calculation
- Report generation etc.

2.2.1 Users

This software is mainly designed to reduce the paper work involved by the People Support department. The users who use this software are

- Administrator/Supervisors
- Employees (Software professionals)
- Board of directors

2.2.2 Login

This is the most important process in the software, which decides the rights to be given to a user who tends to use this software. There are two important process involved. They are,

- Authentication
- Authorization

Integrated People Support Management System.

- Authentication

The user of this software enters into this only after entering his User id and Password. After entering this, the process of authentication starts. The process of this module is to check the validity of the user. If he is found be a valid user then once again it checks for his password. Once the user name and the password are correct then the user enters. (The checking process is done in the database)

- Authorization

Here the user is restricted with rights. He is given the restricted rights according to the administrator. So that the user can access only the area on which he is given the rights. Say if an ordinary user is using the software and the user should be restricted in entering the tax-calculation, salary generation etc.

2.2.3 Masters Maintenance

After the login screen, based on the user rights this module should be enabled. This master maintenance basically has seven options.

- Company details
- Category master
- Control master
- Basic slab
- Set formula
- User login
- Department details
 - Department master
 - Designation details

Integrated People Support Management System.

- **Company Details**

This is the form, which is used to enter the company details, it automatically generates the company code by itself and further process is done only with the company code or otherwise called as company id. The name, address, telephone, email, branch details, company's PF code, ESI code are being given as the input. Every one can view the company details, but whereas only a person in Supervisor/Administrator group can do any changes. Other users are restricted from editing.

- **Category Details**

Every individual detail can be maintained in the category table. Thus every category is given the category-id, which is automatically generated, and further we only represent these details with the help of category-id. This module stores the category id, category type, and category name. Every one can view the category details but whereas only a person in Supervisor/Administrator group can do any changes, other users are restricted from editing. Example location, salary type, deduction, earning, groups, etc..

- **Control Master**

This is the most important part in the salary generation. Here the working month and year are specified and also the no of working days, and no of working hours for that particular month. The control master contains the salary month and year, working days, working hours. Every one can view the control master but only a person in Supervisor/Administrator group can do any changes, other users are restricted from editing.

- Set Formula

The another mile stone in the salary calculation is the formula. Here with the help of the formula we can calculate the BASIC, DA, HRA, CCA ,etc., so we are given the provision to enter the formula for that particular calculation so that we can call this formulae any where in the software for the calculation. Suppose if we want to change the formula it becomes very simple, we can change them here, which in turn reflects in all the places where we have called.

The set formula contains the field name, table name on which the formula is going to be applied, the formula used for calculation, status to specify whether that formula is being currently used. Formula-id is automatically generated according to the formula process. Every one can view the set formula but where has only a person in Supervisor/Administrator group can do any changes. Other users are restricted from editing.

- Parameterization

The formula used to calculate the basic pay, DA, HRA, CCA etc., are not statically given in the program. If they are statically given the processing of coding becomes much easier but more complicated at the time of updating of a formula. So in order to avoid the situation we make the formula to be dynamic. Hence we maintain the Set Formula table. Here we mention the table name and the field name to which the formula belongs, so that they can be called during the time of calculation. If there is any change in the formula we can change it in the set formula table so that they are reflected in the places where they are being called. Thus they become more flexible.

Integrated People Support Management System.

- User login

Here the user login is important, which helps to allocate the groups to the particular user. Only after allocating the groups, the user can access the particular group information. The company maintains a set of groups.

Here this screen helps to allocate the particular groups to the user. And the main advantage is that if the administrator wishes to block any user from using this software he can very well do it. The administrator is given the rights. The user login contains the groups available, groups allocated, user-id, and user password. Every one can view the user login details but where has only a person in Supervisor/Administrator group can do any changes. Other users are restricted from editing.

- Department Master

Here details about all the departments are available and each department is given an individual department code, which is generated automatically.

The department master contains the department code and the department name. The department code must be unique. Every one can view the department details but where has only a person in Supervisor/Administrator group can do any changes. Other users are restricted from editing.

- Designation Master

This designation master holds different designations of a particular department. Here the designation code is automatically generated and it should be unique. This designation master contains the department code and the corresponding designation code and the designation name. Every one can view the designation master but where has only a person in Supervisor/Administrator group can do any changes, other users are restricted from editing.

2.2.4 People Support Maintenance

This people support maintenance consists of the following modules. They are

- Candidate Details
- Offer Letter
- Appointment Letter
- Relieving/Experience Certificate

- Candidate Details

The candidate details will give the information of the person. Name, date of birth, contact address, phone number, qualification, experience, etc. are maintained. Also the company he belongs to, department, also details like passport, salary are also obtained. Here a unique candidate id is maintained which is generated automatically. Further a candidate is identified by his id.

- Offer Letter

The offer letter should get the candidate id, the date when the offer letter is dispatched, expected join date, salary fixed should be got from the user. The letter should be printed when saving. The printed format is a predefined format. A status flag is also maintained to check if the candidate has accepted the offer letter or not.

- Appointment Letter

The appointment letter should get the candidate id, the exact join date, appointment order date, and salary fixed from the user. The letter should be printed on saving in the given format.

Integrated People Support Management System.

- Relieving/Experience Certificate

This should list the resigned employee id, get the date when the certificate is made, from the user. This certificate should be printed on saving in the given format.

2.2.5 Remuneration Maintenance

This remuneration module consists of the following,

- Employee Official Details
- Employee Personal Details
- Employee Salary Details
- O.T entry
- Leave Information
- Loan Information
- Bonus
- Settlement
- Misc. Earning/Deductions
- Arrears

- Employee Official Details

Necessary details from Candidate Details are transferred here and the salary breakup is generated based on the fixed basic and formula stored in the table. Provisions to revise records and enter promotion date are provided.

- Employee Personal Details

This option stores details on contact address of the employee, ESI, EPF number, dispensary, father/husband's name, qualification, experience details, bank account details, passport details etc.

Integrated People Support Management System.

- **Employee Salary Details**

This option is automatically generated for each month. Leave details also is taken for salary calculation. Necessary deductions are also done.

- **OT Details**

This option stores employee id, date/month and OT hours.

- **Leave Information**

The Leave Information in turn has 2 sub-options. They are as follows:

- **Leave Master**

This option stores the leave accumulated for the employee. At the beginning of a new year the leave balance is updated.

- **Leave Details**

This option has provision to enter the leave details of an employee. The type of leave such as CL, PL, SL etc. is necessary here. If the leave allowed are exhausted, automatically LOP is taken into account. An important check is made to trace the number of leave for a particular type that should be within the allowed limits. The reason for the leave is also entered.

Integrated People Support Management System.

- Leave Information

Here again there are 2 sub-options:

- Loan Master

The employee is automatically taken into account. The loan date and the month from which loan has to be deducted is accepted. The loan amount, interest percentage and the number of installments is accepted from the user. The installment amount is calculated based on the loan amount, interest amount and the number of installments. The date of last repayment and balance installment details is also maintained. A unique loan number is automatically generated.

- Loan Details

This option maintains details about the months the loan amount was recovered.

- Bonus

The bonus details are calculated for a year. The sum of earned basics for a given period is taken and the bonus amount is calculated based on the bonus percentage.

- Misc. Earnings / Deductions

This option maintains the miscellaneous earnings and deductions for a particular month. This detail is taken during salary generation. The details are employee id, date, earning/deduction, type of allowance and amount.

2.2.6 Tax Calculation

Here we calculate all the tax, which should be paid by the company. Thus we can maintain all the details of the tax information.

2.2.7 Reports Generation

The report will have the following options. They are

- ESI
- EPF
- Payroll

2.2.8 Utilities

This utility will have the following details. They are

- Change Password
- Import Candidate Details

- Change Password

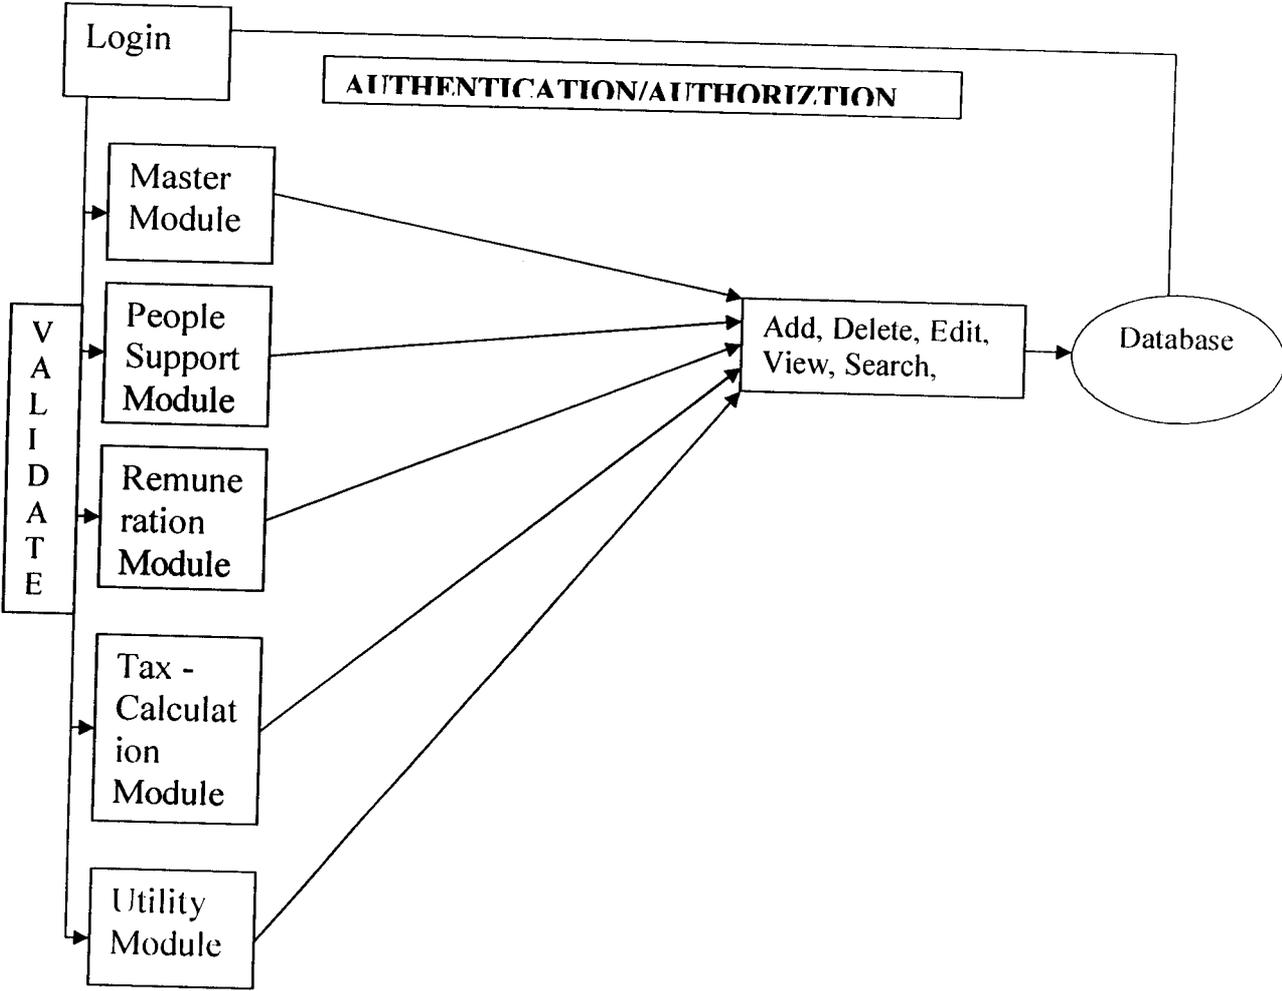

This option provides provision for the user logged in to change his password.

- Import Candidate Details

This option allows to import candidate details from candidate table used by PSD to Employee table. The details in candidate table are split to various tables like Employee Master and Employee Details respectively.

Integrated People Support Management System.

2.2.9 Modules Interaction Diagram

Integrated People Support Management System.

2.3 Requirements on new system.

The module basically comprises of six main options – Master, People Support, Remuneration, Tax Maintenance, reports and Utilities. The user is allowed into the application after authentication. Based on the rights given for the user, the respective modules are enabled. Each module has options to Add/Modify/Delete records. A provision to Search records and Print required data based on any given criteria are given. Another facility such as the Online Help is also provided.

The Master option deals with Company Details, Category Master, Control Master, Basic Slab, Set Formula, User Login, Department Details (Department Master, Designation Details).

Only users belonging to People Support Department (PSD) can access People Support option. This option deals with Candidate Details, Offer Letter, Appointment Letter, and Relieving/Experience Certificate details.

Remuneration option deals with Employee Information, Monthly Remuneration Details, OT Entry, Leave Information, Loan Information, Bonus, Settlement and Misc. Earnings/Deductions. The Tax Calculation module keeps track of the Employee's investments for TDS purpose. This option also calculates the monthly tax.

Various ESI, EPF, Payroll reports and necessary data can be obtained using the Reports option. Moreover the Print option in every form can be used for quick data retrieval.

The Utility option provides utility to Change Password, Import Candidate Details for Accounts Department and Export Candidate Details for PSD.

2.4 USER CHARACTERISTICS.

The user identified for the IPSMS are the operator who use the system for entering the data for all the details of the employee.

Entry Level operations.

These classes of user are the end user of the system they provide IPSMS with information of what they required to enter the details.

Management.

These class of the user are the people who actually use the information provided by IPSMS. The report supplied by the system aims them in keeping track of the employee.

user characteristic is mainly dealt with what are all the quality to be possessed by the user who use the software. so as per this software is concern the user should have to know some of the rules and regulation about this software. so before going into this software the user should understand about the software how it works and what are all the advantage in this software. so new user who want to work with this software can learn this by using the option provided i.e., help. in this help the all the detailed description about this software are provided. once the user learn the help then the user will be familiar to the software. then he can able to know all the advantages in this software. the knowledge of computer operation is necessary and a slight knowledge of my software base will help the user to achieve the required.

**PROGRAMMING
ENVIRONMENT**

Integrated People Support Management System.

3.2 Description of software & tools Used. – Reason for the choice.

- Operating System Windows NT
- Front-End Visual Basic 6.0
- Back-End Oracle 8.0
- Database Connectivity *ADO Provider*
- Reports Crystal Reports
- Architecture Two-Tire (COM)

In case of any Text Handling

(A word processor like WordPad , Word Star or MS Word)

This software is developed using Visual Basic 6.0 that enables ADO – (ActiveX Data Objects) connectivity using Provider concept thereby without using any foreign tools. Reports are generated using Crystal Reports.

The ado provider is used in order to avoid the future complication in the system. The reason is that the software designed so that it is more flexible that to adapt any system on the network. So when we move to new system this ado provider helps us to keep us more comfortable. So thus the foreign tool is avoided in order to avoid the complication

The grid available as an in-built to the visual basic software has many complications and is less flexible . so the firm had their third party tool for this grid. So all the drawbacks are avoided. And it is more flexible then any other in-built tool available with the software. As the designing aspect is more easy and flexible.

This project is designed in two-tire architecture. The advantage in this architecture is that all the coding are written in a DLL file and we link all the DLL file by creating the objects for it. So the security is high. And in future any modification can be done easily. A major change is done very simply by merely changing the DLL file.

The Report used here is the crystal report. This is also a third party tool. The reason for using this report is that the output is more accurate and very clear as per the

Integrated People Support Management System.

print out is concerned. The main reason is that all the government transactions are taken as print out and submitted to the government. so they expect a crystal clear output and this is only provided by the third party tool called as the crystal report.

**SYSTEM DESIGN
AND DEVELOPEMENT**

4. System Design and Development

4.1 Input Design

Input design is the part of the overall system design that requires very careful attention and is the most expensive phase. It is the point of contact for the users with the computer system and so it itself is prone to error. If data going into the system is incorrect then processing and output will magnify these errors. Objectives during input design are as follows:

- Produce cost effective method input.
- Achieve high-level accuracy.
- Ensure that input is free of ambiguity.

Several stages of our input design are:

- Data Recording.
- Transfer of data to input form.
- Data verification.
- Transmitting data to computer.
- Data correction.

The input design involves converting the user-originated input into a computer-based format. The aim of input design is to make the data entry easier, logical error free. It help us to filter errors in the otherwise entered into the database might have brought in a lot of inconsistency.

It involves procedures for capturing data, verifying it and then passing them on to the computer database. After choosing the input medium, attention is given to the careful design of input stages for error handling , control , grouping and validation procedures.

During application development, care has been taken to make this system extremely user-friendly and organize the screens such that the possibilities of making errors are minimized.

Integrated People Support Management System.

List of possible values, list box , text area etc. are provided to the user for selecting the input .This makes system less prone to errors as the input texts are to be selected rather than to be typed in by the users.

Alerts for wrong entries such as primary key duplication , letters in numeric data, wrong data format, range exceed have been provided in the application. Upon this, a well-documented instruction set, have been also provided for the non-frequent and novice users to familiarize them with our application. Maximum care has been taken to ensure that users type in only minimum data into the system.

Input Types:

One of the early activities of input design is to determine the nature of input data. The different types of input data handled by our system are:

- **External** : Prime input to the system.
- **Internal** : Communication with the system.
- **Computerized** : Input to the computer media from the other internal systems.
- **Interactive** : Inputs entered during a dialog.

Static Forms:

- User Login
- Master Module
- People Support
- Remuneration
- Utility

Integrated People Support Management System.

- User Login

This user login is used to check for the authorization and authentication of the user who login to the software. Here the inputs will be the user login name and password. Thus without providing this inputs no user can enter into this software including the administrator.

- Master module

This master module deals with numerous of inputs. The company details contained in it required large number of inputs regarding the company aspects like company name ,location , branch , address etc.

The category master requires the input like the category type and category name.

The control master needs the month and year for the working hours and days as their inputs.

The department and designation needs the department details and the designation details as their inputs.

The user login used here to change the group of the user in which he belongs. Thus the groups will be the inputs for the user login.

- People Support.

The candidate details required lot of inputs regarding the candidate name, address, phone, email, etc.

The offer letter needs the date of the dispatch and the salary details as their input.

The appointment letter needs the date, expected join date and salary details as their inputs.

The relieving certificate needs the employee id and the date on which this certificate is generated as their inputs.

- Remuneration Module

Integrated People Support Management System.

The employee details are given as input like the name, address, salary basic, hra .etc

The leave details needs the date as their inputs for processing the leave.

The loan details needs the loan information as input for further processing like the salary generation.

The bonus and ot details are in need of the employee id and further more inputs for the processing.

- **Utility**

This utility contains the change password in which the new password is given as inputs.

The other thing is the professional tax which needs the slots and amount of tax as their inputs.

4.2 Output Design

An inevitable activity in the system design is the proper design of input and output in a form acceptable to the user. Outputs from the system are required primarily to communicate the result of processing to users.

Outputs also provide a permanent copy of the results for later consultation. An intelligible output design will improve system relationships with the user and help in decision-making process. The various types of outputs required by most system are:

- **External Outputs** : Whose destination is outside the organization and which require special attention.
- **Internal Outputs** : Whose destination is within the organization and which require careful design because they are user's main interface with the computer.

Integrated People Support Management System.

- **Operational Outputs:** Whose use is purely within the computer department.
- **Interactive Outputs:** Which involve the user in communicating with the computer.

The approach to output design is very dependent on the type of output and nature of data. Special attention has to be made to data editing. The choice of appropriate output medium is also an important task.

The selection may be affected by the following kinds of considerations.

- Response time
- Cost
- Software/Hardware
- Suitability of the device for application concerned.

The output design must be specified and documented. Data items have to be accurately defined and arranged for clarity and easy comprehension. The other two objectives that were taken care of were:

- The interpretation of the results of the computer part of the system to users in a form that they can understand meets their requirements.
- The output design specification is made in such a way that it is unambiguous, comprehensive and capable of being translated into a programming language.

Integrated People Support Management System.

Screens, which are major form of output, are designed in various modules in the system. They are

- Salary Report
- ESI Report
- EPF Report

The salary report is generated for each and every employee at the month end. And they are generated in the form of the report. The company maintain the default format in which this report is generated.

The ESI report is designed as per the format in the Form6 and Form7.

The EPF report is designed in the format of Form 3A, Form 7A, Form5, Form 10.

Integrated People Support Management System.

4.3 Database Design

The structure of the table designed in this software are,

4.3.1.1 Table Name

PSMCOMPANY

4.4.1.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	COMPID	Char	3		N		Maintain the company id for all company (Auto generation)
2.	COMPNAME	Varchar2	50		N	Y	Name Of the Company
3.	ADDRESS1	Varchar2	30		N		Address of the Company
4.	ADDRES2	Varchar2	30				Address Of the Company
5.	CITY	Varchar2	15		N		City in which the company located
6.	STATE	Varchar2	20		N		State in which the company is located
7.	COUNTRY	Varchar2	15		N		Country in which the company is located
8.	PHONE	Varchar2	30				The Company Phone Number
9.	FAX	Varchar2	15				The Company Fax Number
10.	E-MAIL ID	Varchar2	30				E-Mail id of the company
11.	PF CODE	Varchar2	12		N		Company PF Code
12.	ESI CODE	Varchar2	12		N		Company ESI Code
13.	PSPVER	Char	5				PSP Version of the company
14.	LSTUSER	Char	25		N		Last user name of the table
15.	LSTUPDT	Date	9		N		Date on which the last values are inserted

Integrated People Support Management System.

4.3.2.1 Table Name

PSMCATEGORY

4.3.2.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	CATCODE	Number	5		N	Y	Unique autogenerated catcode
2.	CATNAME	Varchar2	25		N	Y	Name Of the Category
3.	CATTYPE	Varchar2	20		N		What type of category
4.	LSTUSER	Char	25		N		Last user name of the table
5.	LSTUPDT	Date	9		N		Date on which the last values are inserted

4.3.3.1 Table Name

PSMCONTROL

4.3.3.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	SALMONTH	Char	8		N		Salary month and year
2.	WORKDAYS	Number	2		N		No of working days for that month
3.	WORKHRS	Number	3		N		No of working hours for that month
4.	SALMTH	Char	3		N		Salary month
5.	SALYR	Char	4		N		Salary Year
4.	LSTUSER	Char	25		N		Last user name of the table
5.	LSTUPDT	Date	9		N		Date on which the last values are inserted

Integrated People Support Management System.

4.3.4.1 Table Name

PSMSETFORMULA

4.3.4.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	FID	Number	5		N	Y	Unique autogenerated Formula id
2.	TBLENAM	Varchar2	30		N		Name Of the table the formula belong to
3.	FLDNAME	Varchar2	20		N		Name of the field the formula is for.
4.	FORMULA	Varchar2	80		N		Here is the formula for the corresponding table and filed name
5.	FDATE	Date	9		N		The date of the formula on which it is created.
6.	STATUS	Char	1		N		Whether the formula is currently on use. Y-Using N-Not using
7.	LSTUSER	Char	25		N		Last user name of the table
8.	LSTUPDT	Date	9		N		Date on which the last values are inserted

Integrated People Support Management System.

4.3.5.1 Table Name

PSMUSERLOGIN

4.3.5.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	LOGINNAME	Char	25		N		User id
2.	FULLNAME	Varchar2	25		N		Fullname of the particular user.
3.	PASSWORD	Char	10		N		User's Password.
4.	LSTUSER	Char	25		N		Last user name of the table
5.	LSTUPDT	Date	9		N		Date on which the last values are inserted

4.3.6.1 Table Name

PSMUSERDTL

4.3.6.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	LOGINNAME	Char	25		N		User id(Login name)
2.	GROUP	Number	5		N		In which group the user belongs to.

Integrated People Support Management System.

4.3.7.1 Table Name

PSMDEPT

4.3.7.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	DEPTCODE	Char	4		N	Y	Autogenerated department code
2.	DEPTNAME	Varchar2	25		N		Name of the department.
3.	LSTUSER	Char	25		N		Last user name of the table
4.	LSTUPDT	Date	9		N		Date on which the last values are inserted

4.3.8.1 Table Name

PSMDESIG

4.3.8.2 Structure

Sr	Field Name	Type	Length	Decimals	Null	Unique	Description
1.	DESIGCODE	Char	4		N	Y	Autogenerated designation code
2.	DEPTCODE	Char	4		N	Y	Autogenerated department code
3.	DESIGNAME	Varchar2	25		N		Name of the designation
4.	LSTUSER	Char	25		N		Last user name of the table
5.	LSTUPDT	Date	9		N		Date on which the last values are inserted

Integrated People Support Management System.

4.3.9.1 Table Name

PSMCANDIDATE

4.3.9.2 Structure

Sr.	Field Name	Type	Length	Deci mals	Null	Uni que	Description
1.	CANDID	Number	5		N	Y	Auto generated candidated ID
2.	CANDNAME	Varchar2	25		N		Name Of the Candidate.
3.	ADDRESS1	Varchar2	30		N		Address of the Candidate
4.	ADDRES2	Varchar2	30				Address Of the Candidate
5.	CITY	Varchar2	15		N		City in which the candidate located
6.	STATE	Varchar2	20		N		State in which the candidate is located
7.	COUNTRY	Varchar2	15		N		Country in which the candidate is located
8.	PHONE	Varchar2	30		N		The candidate phone number
9.	E-MAIL ID	Varchar2	30		N		E-Mail id of the company
10.	PPTNO	Char	20				Passport number.
11.	PPTEXPDT	Date	9		N		Passport expiry date
12.	FHNAME	Varchar2	30		N		Father/husband name
13.	QALIFN	Varchar2	150		N		Qualification of the candidate.
14.	EXPERIENCE	Varchar2	1000		N		Experience of the candidate
15.	EXPINYR	Number	4	1	N		Experience in years.
16.	COMPID	Char	3		N		Company id in which the employee belongs
17.	LOC	Number	5		N		Location of the company.
18.	DIVISION	Number	5		N		Division in which the candidate belongs
19.	DEPTCODE	Number	5		N		Department in which the candidate belong.
20.	DESIGCODE	Number	5		N		Designation code the candidate belongs.
21.	SALTYP	Number	5		N		Salary type in which the candidate belong
22.	BASIC	Number	8	2	N		Basic pay of the candidate.
23.	DA	Number	8	2	N		Da of the candidate

Integrated People Support Management System.

24.	CONV	Number	8	2	N	Conv for the candidate
25.	ALLOWANCE	Number	8	2	N	Allowance for the candidate
26.	CCA	Number	8	2	N	Cca for the employee.
27.	SALCALTYP	Char	15		N	Salary category type.
28.	GROSS	Number	8	2	N	Gross pay for the candidate.
29.	LSTUSER	Char	25		N	Last user name of the table
30.	LSTUPDT	Date	9		N	Date on which the last values are inserted

**SYSTEM IMPLEMENTATION
AND TESTING**

5.5 System Implementation and Testing.

5.1 System Implementation.

Implementation is the stage of project when the theoretical design is turned into a working model. A lot of planning has to go for the successful implementation of the system. The major steps that were carried out and the events that occurred in these stages are summarized below.

- ❖ Training was given to the users of the software application, both, theoretically as well as practically. They were briefed on the lines of the objectives of the system, how to operate the system and the benefits that would be reaped from the system.
- ❖ The system was tested in the user environment and the user was asked to give his / her suggestions. It was found that most of their responses were favourable to the effective use of the system.

The software application Integrated People Support Management System is incorporated at DSM Soft (P) Ltd. In order to enable and replace the existing work more effective, efficient and less time consuming.

5.2 System Testing

Software Testing is to test the success of the system and it requires a significant percentage of overall development time and effort. Testing is the process of executing a program with the explicit intention of finding errors, if any. A series of tests are performed over the proposed system before the system is ready for user acceptances.

Integrated People Support Management System.

Software Testing is done with the following objectives:

- ❖ Verification of software design by evaluating structural interfaces and procedural requirements.
- ❖ Validation of software requirements.
- ❖ To provide a method for systematic assembly of software.
- ❖ Definition of quality bonafide to which maintenance can be traced.

TESTING

Testing is vital to the success of the system. System testing makes a logical assumption that if all parts of the system are correct, the goal will be successfully achieved. Once program code has been developed, testing begins. The testing process focuses on the logical internals of the software, ensuring that all the statements have been tested, and on the functional externals, that is conducting tests to uncover errors and ensure that defined input will produce actual results that agree with required results.

Objective:

The objective is to test the system thoroughly so that it meets all the implicit and explicit requirements stated in the software requirement specification.

- ❖ Testing is a process of executing a program with the intent of finding an error.
- ❖ A good test case is one that has a higher probability of finding an unpredictable error.
- ❖ A successful test is the one that provides solution to that unpredictable error.

Integrated People Support Management System.

Testing process is as follows:

- ❖ Unit testing
- ❖ Walk-through testing
- ❖ White-box testing
- ❖ Integration testing
- ❖ System testing
- ❖ Specification testing
- ❖ Performance testing
- ❖ Validation testing
- ❖ Output testing

Unit testing:

After the completion of screen design and low-level design, as according to the requirements unit testing is performed. The aim is to test the functionality of modules in individual screens. Necessary changes are brought out after evaluation, which are compared with the sample results. These sample test cases were found successful with system.

Walk-through testing:

Once the system is tested for its working for the needs at the unit testing phase, the code is thoroughly checked for any redundancy, any deviations in the naming conventions of the variables, whether the code is optimized or not and so on.

Integrated People Support Management System.

White-box testing:

All the looping structures and conditional statements are checked for their correctness. At first the loops are checked whether they work for both the conditions properly and is branching takes place correctly. Now the boundary condition are checked how they work between boundaries and at the same time they are also checked outside the boundaries and are found everything goes on in right manner.

Integration testing:

This testing is carried out after integrating al the screen interfaces into one package. In this phase testing is basically concerned with all the integration issues that typically arises when all the modules were put together the system is tested so that there is a smooth navigation across the system without any integration errors.

Validation testing:

After integrating into single package, the validation test is conducted. A range of sample inputs are selected and checked whether the system raises errors for non-appropriate inputs and accepts the appropriate inputs.

Output testing:

The system is checked whether it produces desired output for input. In our system when a media file is run using multimedia player audio or video or audio and video will be produced as result in the speaker or on the display unit dependently.

Integrated People Support Management System.

System testing

The newly developed system is tested 'Test Case' are developed right before implementation testing. System testing is designed to uncover weakness that was found in earlier tests. This includes forced system failure and validation of the total system, as its users in the operational environment will implement it. The total system is also tested for recovery and fallback after various major failures to ensure that no data are list during the emergency.

Specification testing

The stated specification is tested with new system by test cases and it found that it fulfills the specification.

Performance testing

Performance of the new system based on time factor is tested and it is found to be good.

CONCLUSION

6. Conclusion.

This real-time project entitled “*Integrated People Support Management System*“ is entirely a menu driven application which has been tested with sample data and implemented for DSM SOFT (P) Ltd., Nungambakkam, Chennai with actual data.

This computerized system helps to generate reports like ESI Report, EPF Report, necessary Individual Reports and various Summary / Detail Reports etc. with less effort and thereby reduces the work done and time required to do manually.

In future, this computerized system can be expanded to further client needs in transaction processing and to generate more reports. More modules can also be appended along with existing information. Thus, this system has been found to satisfy the client’s requirements.
